

It's Chow Time!

by Heidi Bee Roemer

Crabs and snails are a treat
that playful **otters** like to eat

What do **monkeys** munch lunch?
Ripe bananas by the bunch!

These insects' appetite is good;
termites like to chew on wood.

Eating this may make you squirm,
but **robins** love a juicy worm!

Searching under rocks and plants,
anteaters eat wiggling ants.

Hungry **lions** have a feast;
they devour wildebeest.

Koalas nibble in the trees
on yummy eucalyptus leaves.

Mosquitoes bite and make you itch;
your blood is what these insects snatch!
