

Green and Clean: Earth Friendly Energy

By Heidi Bee Roemer

There is energy in **wind**.
There is energy in **sun**.
There is energy in **water**,
enough for everyone.

Turbines use the wind,
Solar panels use the sun.
Dams use flowing water
to turn the power on.

There's energy in **trees**.
And here's a newsy scoop:
biomethane gas is made
from smelly **bovine poop!**

Clean and green's the answer
to help reduce pollution.
It's good for our environment--
It's our energy solution!

*NOTE: *Methane*, derived from dairy manure, can be refined to produce vehicle fuel, known as biomethane or "cow power."
